MCZ Series Common Mode Filters

Multilayer Common Mode Filters for High-speed Signal Lines

TDK's MCZ Series Common Mode Filters were designed for use in high-speed and ultra-high speed differential signal lines. They consist of a multilayer structure and have a widened frequency range for differential mode transmission, while ensuring common mode impedance. The MCZ Series suppresses common mode noise without influencing the high-speed differential transmission line signal.

Features

- Suppresses common mode noise without influencing the high-speed differential transmission line signal
- No polarity
- Operating temperature range of -40°C to $+85^{\circ}\text{C}$
- Storage temperature range of -40°C to $+85^{\circ}\text{C}$ after the circuit board is mounted
