

Is Now Part of

ON Semiconductor®

To learn more about ON Semiconductor, please visit our website at
www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

FAN4852

9MHz Low-Power Dual CMOS Amplifier

Features

- 0.8mA Supply Current
- 9 MHz Bandwidth
- Output Swing to within 10mV of Either Rail
- Input Voltage Range Exceeds the Rails
- 6V/ μ s Slew Rate
- 11nV/ $\sqrt{\text{Hz}}$ Input Voltage Noise
- Fully Specified at +3.3V and +5V Supplies

Applications

- Piezoelectric Sensors
- PCMCIA, USB
- Mobile Communications / Battery-Powered Devices
- Notebooks and PDAs
- Active Filters
- Signal Conditioning
- Portable Test Instruments

Description

The FAN4852 is a dual, rail-to-rail output, low-power, CMOS amplifier that consumes only 800 μ A of supply current, while providing \pm 50mA of output short-circuit current. This amplifier is designed to operate supplies from 2.5V to 5V.

Additionally, the FAN4852 is EMI hardened, which minimizes EMI interference. It has a maximum input offset voltage of 1mV and an input common-mode range that includes ground.

The FAN4852 is designed on a CMOS process and provides 9MHz of bandwidth and 6V/ μ s of slew rate. The combination of low-power, low-voltage operation and a small package make this amplifier well suited for general-purpose and battery-powered applications.

Ordering Information

| Part Number | Operating Temperature Range | Package | Packing Method |
|--------------|-----------------------------|---------------------|-----------------------|
| FAN4852IMU8X | -40 to +85°C | 8-Lead MSOP Package | 3000 on Tape and Reel |

Pin Configuration

Figure 1. Pin Assignments

Pin Definitions

| Pin # | Name | Description |
|-------|------|---------------------------|
| 1 | OUT1 | Output, Channel 1 |
| 2 | -IN1 | Negative Input, Channel 1 |
| 3 | +IN1 | Positive Input, Channel 1 |
| 4 | -Vs | Negative Supply |
| 5 | +IN2 | Positive Input, Channel 2 |
| 6 | -IN2 | Negative Input, Channel 2 |
| 7 | OUT2 | Output, Channel 2 |
| 8 | +Vs | Positive Supply |

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only. Functional operation under any of these conditions is NOT implied. Performance and reliability are guaranteed only if operating conditions are not exceeded.

| Symbol | Parameter | Min. | Max. | Unit |
|------------------|-----------------------------------|----------------------|----------------------|------|
| V _{CC} | Supply Voltage | 0 | 6 | V |
| V _{IN} | Input Voltage Range | -V _S -0.5 | +V _S +0.5 | V |
| T _J | Junction Temperature | | +150 | °C |
| T _{STG} | Storage Temperature | -65 | +150 | °C |
| T _L | Lead Soldering, 10 Seconds | | +260 | °C |
| Θ _{JA} | Thermal Resistance ⁽¹⁾ | | 206 | °C/W |

Note:

1. Package thermal resistance JEDEC standard, multi-layer test boards, still air.

ESD Information

| Symbol | Parameter | Min. | Typ. | Max. | Unit |

Application Information

General Description

The FAN4852 amplifier includes single-supply, general-purpose amplifiers, fabricated on a CMOS process. The input and output are rail-to-rail and the part is unity gain stable. The typical non-inverting circuit schematic is shown in Figure 29.

Figure 29. Typical Non-Inverting Configuration

Input Common Mode Voltage

The common mode input range includes ground. CMRR does not degrade when input levels are kept 1.2V below the rail. For the best CMRR when using a V_s of 5V, the maximum input voltage should be 3.8V.

Figure 30. Circuit for Input Current Protection

Power Dissipation

The maximum internal power dissipation allowed is directly related to the maximum junction temperature. If the maximum junction temperature exceeds 150°C, performance degradation occurs. If the maximum junction temperature exceeds 150°C for an extended time, device failure may occur.

Overdrive Recovery

Overdrive of an amplifier occurs when the output and/or input ranges are exceeded. The recovery time varies based on whether the input or output is overdriven and by how much the range is exceeded. The FAN4852 typically recovers in less than 500ns from an overdrive condition. Figure 31 shows the FAN4852 amplifier in an overdriven condition.

Figure 31. Overdrive Recovery

Driving Capacitive Loads

Figure 31 illustrates the response of the amplifier. A small series resistance (R_s) at the output, illustrated in Figure 32, improves stability and settling performance. R_s values provided achieve maximum bandwidth with less than 2dB of peaking. For maximum flatness, use a larger R_s . Capacitive loads larger than 500pF require the use of R_s .

Figure 32. Typical Topology for Driving a Capacitive Load

Driving a capacitive load introduces phase-lag into the output signal, which reduces phase margin in the amplifier. The unity gain follower is the most sensitive configuration. In a unity gain follower configuration, the amplifier requires a 300Ω series resistor to drive a 100pF load.

Layout Considerations

General layout and supply bypassing play major roles in high-frequency performance. Fairchild evaluation boards help guide high-frequency layout and aid in device testing and characterization. Follow the steps below as a basis for high-frequency layout:

1. Include 6.8 μ F and 0.01 μ F ceramic capacitors.
2. Place the 6.8 μ F capacitor within 0.75 inches of the power pin.
3. Place the 0.01 μ F capacitor within 0.1 inches of the power pin.
4. Remove the ground plane under and around the part, especially near the input and output pins, to reduce parasitic capacitance.

Minimize all trace lengths to reduce series inductances.

Refer to the evaluation board layouts shown in Figure 33 for more information.

When evaluating only one channel, complete the following on the unused channel:

1. Ground the non-inverting input.
2. Short the output to the inverting input.

| Evaluation Board | Description |

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS

Definition of Terms

| Datasheet Identification | Product Status | Definition |
|--------------------------|-----------------------|---|
| Advance Information | Formative / In Design | Datasheet contains the design specifications for product development. Specifications may change in any manner without notice. |
| Preliminary | First Production | Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design. |
| No Identification Needed | Full Production | Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design. |
| Obsolete | Not In Production | Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only. |

Rev. 155

ON Semiconductor and  are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
